

“I have studied and critiqued Alexey’s work *in great detail* over the past eight years, and I am able to testify that it meets the standard of any first tier research institution in this country, both in quality and in originality.

In my opinion, Alexey’s recent publication in the *Journal of Mathematical Physics* is an important and impressive piece of work, especially when considered along side his previous publications. They are part of a series of inter-related articles in which he is laying a new foundation for a geometrical approach to quantum physics. Many physicists have recognized the importance of a geometrical approach to quantum physics in recent years, but no-one has managed to take it as far as Alexey. He is establishing himself as a major innovator in this field.”
